11/18/2011 San 280

san280

1 mm

(NAD assembly 111-F built 11/18/11)

for E+20 calib.
med, 600s

Looks same as San 279, except
for a sintered diamond anvil on
block 1

(press 29.7 tons)

T-B: 5.755
 1-3: 5.468
 2-4: 5.496

1: 1.279	5: 1.058	9: 1.118
2: 1.232	6: 0.938	10: 1.080
3: 1.138	7: 1.124	11: 1.235
4: 1.058	8: 1.212	12: 1.332

1-2 working DVRTs, both on top.

n Page No. 11/18 / 2011 San-280 cont.

22 13 image 0001.tiff at open press ol.
 23 09
~~22 09~~ 0002.med mid ol at open press 600s. (side anvils were out)

11/19/11

0026 Press closed.
 0027 Logger started, 10s interval.

0029 McP to 10%. Target: 30T
 0149 10.2T
 0230 25.8T lol (onscreen): 117mm this was piston
 0237 Diff Ram valve closed
 @ 29.9T lol = 129mm

0245 heater appears to work. Begin heating to 1100°C using San-279 wires

0300 @ 1100°C x-ray spot hard to see when slits closed. See cl. in all active dets though.

0305 Centering scan in x. Use sph 7-8 doublet. center on $x = -7.9$

clf I remember correctly, "imaging-and-diffraction-scan" requires "real", non "x-ray" value of y position

0322 "Press y" reads -13.37, so initial scan will be .0003.med, 600s (26.1, 26.1, -13.37, 0.2, 0.2), photo #2 lol = 128mm
 photo again is saved, but can't seem to open on this comp opens on other comp, but very dark. lengthen exposure.

Ok - pattern looks strong.

0336 Jpg names
 0343 Rams @ ~140 bars. Should be close to take-off. Good DVRT appears to go wrong way, slightly
